# General

## **FROM ARGENTINA TO THE WORLD**

Our company NUXEN SRL is located in Buenos Aires, Argentina, and since the year 2000 it manufactures and exports the Deflex System to other countries in the Americas, Europe, Asia, and Africa. In addition to the manufacturing plant, we have two trade offices and a training area for dental technicians.

## **CERTIFIED QUALITY**

The main goal of the company was to reach international standards in production. This is why we work in accordance with ISO, following the good manufacturing practice (GMP) standards.

## **SHORTENING DISTANCES**

Another of our goals is having a specialized area of international trade, in order to offer a comprehensive advisory service for international distributors. Having a smooth communication flow and efficient logistics allows us to be close to our customers all over the world.

## **BRANDING MANUAL**

What follows is the branding manual for Deflex new visual identity. The following pages show guidelines to use the different visual resources that make up the brand identity.

It should be noted that brands evolve, adjusting to changes in the world, so this document is simply a starting point. It will be revised over time. Please visit the web site to make sure you have the latest version of the document.

# *Logo Application*

## Logo position

### CORRECT APPLICATION POSITIONS

The *Deflex* logo is applied horizontally and vertically, with no rectangles or geometric shapes enclosing it.

Deflex®

Deflex®

### INCORRECT APPLICATION POSITIONS

Some incorrect ways of applying the logo are shown below. The logo should never be applied diagonally or upside down.

Deflex®

Deflex®

## Margin

In order to preserve the integrity of the *Deflex* Logo we need to keep a minimum clean space or margin around the logo. This clear space isolates the logotype from competing graphical elements, thus helping us keep the divided attention on the elements.

**The illustration below shows the margin space around, the size of which matches the D in the Deflex logo.**

Example of a vertical piece

Example of a horizontal piece

## Minimum size

The *Deflex* logo maintains its visual impact in a broad range of sizes. However, when the logo is reproduced too small, it is not readable and its impact is reduced

**For printing applications, the Deflex logo must never be reproduced with a width of less than 15 mm (0.6 in).**

For digital applications, the *Deflex* logo must never be reproduced with a width of less than 100 pixels at 72 dpi.

# Misuse

Misuse of *Deflex* logo compromises its integrity and effectiveness. Our logo is more dynamic than most corporate identities. However, there still are some things that jeopardize its readability

**Not allowed:**

1. Do not use the logo outlined.
2. Do not rotate the logo in any direction.
3. Do not change the color of the letters separately.
4. Do not put a secondary logo or another logo next to the *Deflex* logo.
5. Do not deform the logo.
6. Do not enclose the logo using any geometric shape.

## Logo colors

The *Deflex* logo may appear in any of the colors of the brand that are shown below. The choice of colors should be determined by the item or content to which the logo is applied.

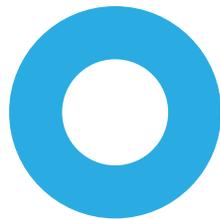

**Deflex**<sup>®</sup> Main color

**Deflex**<sup>®</sup> Secondary color

**Blue Deflex**

Pantone SC	301 C
CMYK	100/70/30/10
RGB	0/125/125
Web Hex	00527d

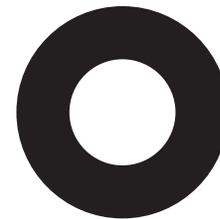

**Pure Light Blue**

Pantone SC	306 C
CMYK	100/0/0/0
RGB	0/174/239
Web Hex	#00aef

In some cases, a black and white logo may be necessary. In these cases, use one of the following options.

**Deflex**<sup>®</sup> Black and white pieces option 1

**Deflex**<sup>®</sup> White or cut-out letters

**Black**

Pantone SC	635 C
CMYK	0/0/0/100
RGB	35/31/32
Web Hex	#231f20

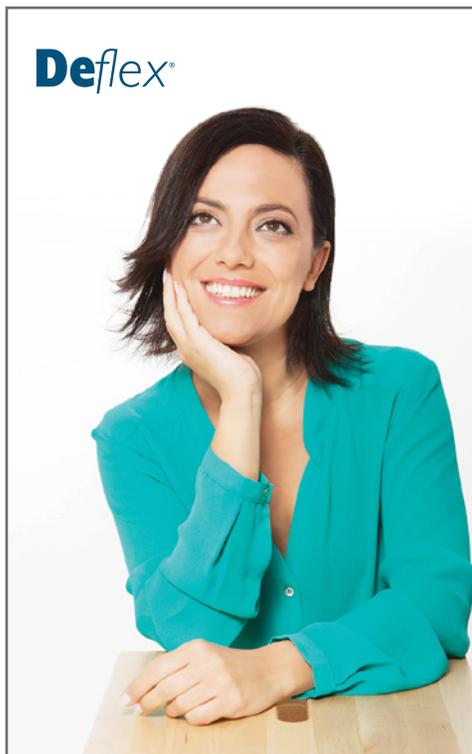

**White**

Pantone SC	635 C
CMYK	36/0/10/0
RGB	255/255/255
Web Hex	#ffffff

## Coexistence of the logo and the image

In most cases, the *Deflex* logo is applied separately from the image on plain colors. But it may also appear behind the image, as long as its readability is not affected (the image may be overlaid on the logo).

**This is an exception occurring in caps or posters to achieve greater depth in the setting.**

General application:  
logo separated from  
the image

Particular application:  
logo behind the image  
in case of caps or posters.

# *Typography*

# Typography family

## MAIN TYPOGRAPHY

The main font for *Deflex* in corporate communications is Helvetica Neue. Helvetica Neue is a classic typography with a wide variety of thicknesses and usage flexibility. Consistency in the use of this font will help create a consistent and strong identity.

Helvetica Neue Ultralight

*Helvetica Neue Ultralight Italic*

Helvetica Neue Light

*Helvetica Neue Light Italic*

Helvetica Neue Regular

*Helvetica Neue Rregular Italic*

Helvetica Neue Medium

*Helvetica Neue Medium Italic*

Helvetica Neue Bold

*Helvetica Neue Bold Italic*

## SECONDARY TYPOGRAPHY

As a secondary typography we have Univers, in its 8 variables. This typography is used in product logos, small pieces needing a condensed font (labels, boxes, etc.). Its main characteristic is its versatility, in addition to its good readability in small sizes.

Univers 45 light

*Univers 45 light oblique*

Univers 55 Roman

Univers 57 Condensed

# *Injection Line*

February 2017

## General characteristics

The *Deflex* denture system offers thermo-injectable materials with different balances of flexibility and stiffness that allow for multiple applications for removable dentures. Polymers are highly resistant and monomer-free, and contain elastic memory, standing out for their minimal liquid absorption and very low shrinkage levels.

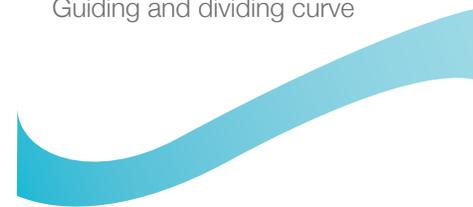

Example of a graphical piece

## Graphical elements

Below you will find just a few of the elements that may be used in the pieces of the injection line. Both the curve and the bubbles are made in a gradient of the colors shown on the next page.
